EXHIBIT A: 2017 DSATS POTENTIAL TRAFFIC COUNT LOCATIONS

The scope of work is to collect traffic movement data in the DeKalb urban area of DSATS, compile the data, analyze the ADT and ADTT counts for 2017, and compare and contrast that data with the ADT and ADTT data collected from 2005 – 2016. The DeKalb urban area is identified as Plank Road on the north, Keslinger Road on the south, Nelson Road to the west and Airport Road to the east. The purpose of the annual count is to utilize data to identify trends in the transportation network and to make informed decisions on transportation related programs and systems. This project shall compare area transportation patterns and growth trends by comparing the 2017 data collected with earlier data collected from 2005 through 2016. Data and analyses from previous years will be supplied by DSATS staff.

The work will include data collection within the DeKalb urbanized area (UZA), including:

- Five (5) intersections for turning movements with classification and signal warrants review data (12-hour counts, same day 6 am – 6 pm),
- Twenty-seven (27) intersection volume counts (72 full hours during mid-week), and
- Five (5) roadway segments (72 full hours during mid-week).

Proposals may incorporate use of the contractor’s choice of:

- Traffic tube automated traffic recorders,
- Hi-star counters (vehicle magnetic imaging),
- Miovision (or similar video collection),
- Wavetronix (radar classification counter), or
- Equivalent alternates.

After collection of the data, the contractor will compile, analyze, and present the information, including:

- ADT maps with volume weighted lines and bi-directional data,
- ADT maps with volume weighted line and truck percentages, and
- ADTT maps with volume weighted lines and bi-directional data results.

Examples of Reports/Memos from previous years can be found on the DSATS website at: http://www.dsats.org/537/Current-Plan.

In addition to the completed Report/Memo, the contractor should also provide in electronic format that can be manipulated, including:

- All raw data,
- Data summary sheets, and
- GIS mapping files.

The 2017 reduced data will then be reviewed against the trends of the past twelve (12) years of data collection where applicable to similar intersections and segments. A summary of earlier year’s project data can be delivered to the selected firm for their viewing and incorporation into comparative summaries. A meeting or conference call will then be conducted with DSATS staff to discuss the count results and determine additional conclusions that can be reached from the
comparative summary. The final report and additional data shall be submitted to the City in electronic format.

It is noted that the Northern Illinois University (NIU) Spring Semester classes end on May 4, 2017 with graduation on May 13, 2017. As the student population has a significant impact on regional traffic, the majority of the traffic counts should occur prior to the end of the spring semester classes. Priority should be given to locations near NIU and student housing. Outlying area traffic counts, not affected as heavily by NIU traffic, can potentially be performed after the spring semester has ended. Previous years traffic counts have taken approximately 6 weeks to perform.

This Agreement shall have the following timeline in effect:

- Draft Final Report must be submitted to DSATS staff no later than June 23, 2017.
